

Modern cloud and DevOps solutions for businesses

We build cloud-native infrastructures and DevOps solutions in enterprise environments.

Our goal is to deliver long-lasting DevOps, cloud, and Kubernetes solutions as a reliable partner.

We aim to increase your organization's efficiency while significantly reducing IT operations costs.

Code Factory

Code Factory is an engineering team founded in 2014, specializing in cloud technologies and modern infrastructure solutions.

Our main focus areas

AWS-based infrastructure design and implementation

Kubernetes-based container platforms

DevOps and automation

Designing modern architectures and modernizing legacy systems

Our expert team, with more than 50 industry certifications, works in enterprise environments on complex systems.

Our mission is to establish stable, scalable, and sustainable IT operations in the long term.

Typical challenges we solve

Hard-to-scale or unstable infrastructure

Slow and manual release processes

High operational costs

Technological lag due to legacy systems

Lack of cloud and DevOps expertise within the organization

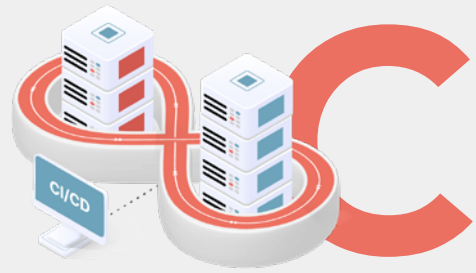

Code Factory doesn't just build systems — we create operational structures that remain sustainable independently in the long run.

Our services

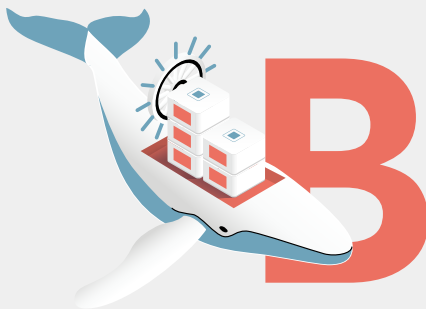

Cloud infrastructure and migration

- Migrating on-premise systems to the cloud
- Designing and optimizing AWS infrastructure
- Building cost-efficient, scalable architectures

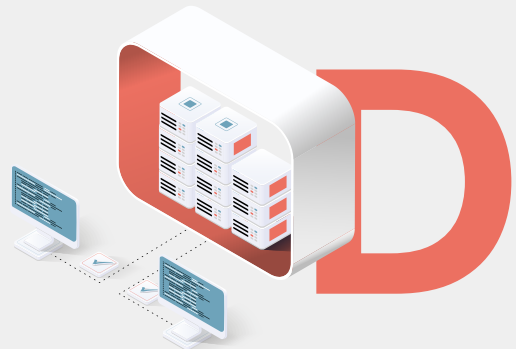

DevOps and CI/CD

- Automated build and deployment processes
- Infrastructure as Code solutions
- Stabilizing and accelerating release processes

Kubernetes and containerization

- Designing, implementing, and operating Kubernetes clusters
- Creating containerized application environments
- High-availability platforms

Architecture modernization

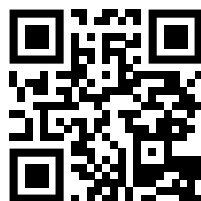

- Transforming monolithic systems into microservices-based architectures
- Handling scalability and performance challenges
- Technological renewal with minimized business risk
